*Inauguration Function*

*“Aspirations are your possibilities; Keep them high” - Dr. Raghunath Mashelkar.*

*Inauguration of ESCI-21: Lamp lighting by Shri Suresh Shinde, Honorary Joint Secretary AISSM Society*

ESCI-2021 is the platform where academics and industry researchers present their latest algorithms, models and technologies and explore new trends and ideas on smart computing and informatics. The aim of this conference is to provide an allied platform for emerging trends in smart computing, networking, communication, signal and image processing, cyber security and IoT.

The key intention is to provide an opportunity for the global participants to share their ideas and experiences in person with their peers expected to join from different parts of the world. In addition to this, the gathering will help the delegates to establish research environment as well as to find the international linkages for future collaboration in their career path. The conference focuses on various modernization and innovation paradigms that may be applied to present practical and creative solutions to diverse issues in society, industry and environment.

The inauguration was done by Dr. Raghunath Mashelkar through an online platform.

Dr. Raghunath Mashelkar during his speech asserted the magic of achieving high aspiration with assured innovation success. When the aspirations are high then the vast possibilities are open for you. He added that-“I” in India must stand for “innovation” should not stand for individual or imitations in this regard we have to make a paradigm shift in our innovation strategy.

According to him, successive pole vaulting can be achieved through ‘Assured total innovation framework’ Any innovation you do see that should be affordable, scalable, sustainable, universal, rapid, distinctive, if you find one or two criteria missing then we bound to fail over a period of time.” said he.

He congratulated AISSMS IOIT for organizing such a wonderful conference through the online platform and grabbing opportunities in the adversity of the current situation and wished the best for it.

Shri Malojiraje Chhatrapati, Secretary AISSM Society sent his well-wishing message for guests and participants on behalf of AISSMS society and wished for the grand success of the conference.

Shri Suresh Shinde, Honorary Joint Secretary AISSM Society, addressed the gathering by inspiring words; he said “The world is becoming smart so as we in terms of education and grabbing opportunities and through 5 A’s -Ask, Advise, Assess, Assist, and Arrange. We should move toward the smartness.”

Dr. P.B. Mane Principal of AISSMS IOIT highlighted the reasons for organizing the conference and threw light on the proceedings of the conference he said that upcoming engineers should take the benefit of such conferences to encourage knowledge sharing and be enlightened about innovative ideas. Extending the thought of the Assured framework of Dr. Mashelkar on behalf of all teachers he promised to bring quality education through innovation.

IEEE's Pune section president Mr. Girish Khilari briefed the gathering by highlighting the need of raising the bar of quality and standards in higher education by focusing on important keywords like the benefit of humanity, improving global condition. Enhance public understanding.

At the time of inauguration Honorary joint Secretary Mr. Suresh Shinde, IEEE's Pune section president Mr. Girish Khilari, Vice-chair Dr. Jagdish Chaudhari secretary Dr. Neha Sharma, Mr. Dinanath Kolkar was present. This conference aimed to provide an allied platform to emerging trends in smart computing, networking, communication, automation, IoT signal, and image processing and also to provide an opportunity to global participants to share their ideas and experiences.

The conference received overall 786 papers from which 154 papers were accepted for presentation. Dr. Suresh Lamar anchored the function while Principal Dr. P.B. Mane presented the vote of thanks.

Technical details of the International Conference on Emerging Smart Computing & Informatics ESCI2021.

Papers received -708 papers.

We have followed 4 level review process.

**Level 1:** Technical Quality check.

**Level 2:** Plagiarism check, where we have used IEEE supported plagiarism detection software called crosscheck.

**Level 3:** Review by at-least 2 external reviewers.

**Level 4:** Review by technical program committee.

In the first quality check at level 1, 62 papers were rejected because of a lack of sufficient technical details in them. Out of the remaining 466 papers, 135 papers were rejected during the Plagiarism check. We have followed the IEEE policy of rejecting the papers if its similarity index is more than 30%. Or if the single source plagiarism is more than 10%.

We were having 3 tracks at this ESCI conference.

There were 19 Special sessions, through which we have received 239 papers. The special session was like the main track only; where the special session organizer collected the papers for the conference. The review of these papers was conducted in coordination with the technical program committee of the conference. The organizer of the special session invited as session chair for his special session as per conference norms.

In our ESCI conference we were having 5 successful special sessions coordinated by Dr. J B Patil. The success of a special session depends on the final registered papers in the conference. 39 papers were registered for the conference through such special sessions.

There were 187 reviewers from various domains, to review the papers.

We have received papers from all over the country & also papers from abroad.

Our review process was so strong, that out of 708 papers we could select only 154 papers. So, the acceptance ratio turnout near to be ~28%. Most of the reputed conferences are having an acceptance ratio of around 30%.

Out of these final 154 selected papers, 16 papers are from abroad which includes countries like USA, UAE, Ethiopia, Iraq, Bangladesh, Sri Lanka, Egypt, Indonesia, Oman, South Africa, Vietnam, Turkey, and Hong Kong.

There are 60 papers from outside Maharashtra, 41 from Maharashtra but other than the Pune region & 37 papers from the Pune region. We received 5 papers from IITs & NITs, also 4 papers from Intel, persistence, ISRO, and CSIR. We have arranged 6 keynote sessions and 4 tutorial sessions for participants. 1025 participants have taken benefits of these sessions.

The presentation of papers was distributed in 25 sessions including special sessions. Each session was chaired by two session chairs along with two session coordinators.

We have selected one best paper from each session depending on evaluation criteria which include Presentation Quality, Research Contents Depth of Understanding, Effectiveness and Time Management.

**Abstract of Session/keynote/Special session/tutorial –**

Speaker Dr. Prachi Joshi discuss on the Artificial Inelegance, Machine learning & Deep learning. She explained the journey of AI, ML and DL and the present condition. Artificial intelligence and machine learning are the part of computer science that are correlated with each other. These two technologies are the most trending technologies which are used for creating intelligent systems. Although these are two related technologies and sometimes people use them as a synonym for eachother, but still, both are the two different terms in various cases.

Artificial intelligence is a field of computer science which makes a computer system that can mimic human intelligence. It is comprised of two words "**Artificial**" and "**intelligence**", which means "a human-made thinking power."Machine learning enables a computer system to make predictions or take some decisions using historical data without being explicitly programmed. Machine learning uses a massive amount of structured and semi-structured data so that a machine learning model can generate accurate result or give predictions based on that data.

Mr. Dong Xu explained the applications, the target domain contains very few or even no labeled samples, while an existing domain (i.e., the auxiliary domain) is often available with a large number of labeled examples. Millions of loosely labeled Flickr photos or YouTube videos can be readily obtained by using keywords-based search. On the other hand, while users may be interested in retrieving and organizing their own multimedia collections of images and videos at the semantic level, they may be reluctant to put forth the effort to annotate their photos and videos by themselves.

This problem becomes furthermore challenging because the feature distributions of training samples from the web domain and consumer domain may differ tremendously in statistical properties. To explicitly cope with the feature distribution mismatch for the samples from different domains, in this talk sir introduced his visual domain adaptation approaches under different settings and also describe their interesting applications in image and video recognition.

Prof. Xu also briefed about the areas of image and video processing, computer vision and multimedia.

The slide is titled "Domain Adaptation in Computer Vision". It discusses two types of domain adaptation: homogeneous and heterogeneous. Homogeneous domain adaptation includes single-source and multi-source, both facing the challenge of data distribution mismatch. Heterogeneous domain adaptation faces the challenge of different representations, with an example of videos to images. A diagram shows source domains (Source Domain 1, Source Domain 2, Source Domain 3) being mapped to a target domain. A timer at the bottom indicates 00:09:25.

The slide is titled "SVM: A brief introduction". It lists the steps: Support Vector Machine, Given training data  $\{x_i, y_i\}_{i=1}^n$ , and Learn the classification model  $f(x) = w^T x + b$ . It shows the primal form of the SVM optimization problem: 
$$\min_{w, b} \frac{1}{2} \|w\|^2 + c \sum_{i=1}^n \xi_i$$
 subject to  $y_i(w^T x_i + b) \geq 1 - \xi_i$  and  $\xi_i \geq 0$ . This is labeled as "Hinge loss". The dual form is also shown: 
$$\max_{\alpha} \sum_{i=1}^n \alpha y_i (w^T x_i + b) - \frac{1}{2} \| \sum_{i=1}^n \alpha y_i x_i \|^2$$
 subject to  $\sum_{i=1}^n \alpha y_i = 0$  and  $0 \leq \alpha_i \leq 1$ . The slide also mentions "Convex quadratic optimization (QP) & test optimization (SMO)" and "Good generalization capability for real world applications". A timer at the bottom indicates 00:05:11.

The slide is titled "Domain Adaptation in Computer Vision". It discusses image and video recognition. For image recognition, it lists datasets: PASCAL, SUN, Caltech-101, and ImageNet. For video recognition, it lists datasets: PASCAL, UCF101, and HMDB51. A diagram shows a source domain (PASCAL) being mapped to a target domain (PASCAL). A timer at the bottom indicates 00:05:11.

Dr. Mohammad Alamgir Hossain explained recent trends and challenges in image recognition & analysis.

Several images of understanding phases, neural structure & automatic network engineering.

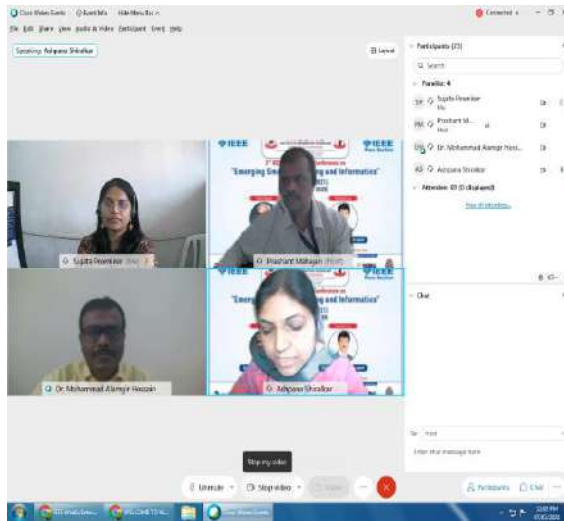

Sir has also described Artificial Intelligence, Machine Learning, Computer Data Security and Privacy, Computer Vision & Image Processing.

Artificial Intelligence algorithms are fed months of activity logs to achieve competence at identifying anomalies and threats. The information provided is used to set a base for normal performance and calculate and compare new occurrences using that. These patterns help the machine learning system to recognize a threat to the system.

Insights provided on medical image recognition, real and practical challenges of image recognition with AI.

### Recent Challenges in Image Recognition

- During the last few decades researchers and technical leaders in computer vision, there have been amazing and rapid progress in image recognition.
- For many decades it has noticed that object detection performance skyrocket from approximately 30 percent in mean average precision to more than 90 percent at present.
- For image classification on the challenging ImageNet dataset, state-of-the-art algorithms now exceed human performance.
- These improvements in image understanding have begun to find a wide range of applications, including video surveillance, autonomous driving, intelligent healthcare and many more.

**Introduction**

- The Bresenham's Line Drawing Algorithm (BLDA) is used to determine the points needed for rasterizing a line.
- In this algorithm, we have to find out the number of points between the two given points  $(x_0, y_0)$  and  $(x_1, y_1)$  considering  $(x_0, y_0)$  as an initial point.

The line can be plotted by the following given steps:

Step I: Consider the initial point  $(x_0, y_0)$ .

Step II: Find  $dy$  and  $dx$ , where  $dy = y_1 - y_0$  and  $dx = x_1 - x_0$ .

Step III: Find the initial decision parameter  $P_k = 2dy - dx$ .

Step IV: If  $P_k < 0$ , then next point will be  $(x_k + 1, y_k)$  and  $P_{k+1} = P_k + 2dy$ .

Step IV: If  $P_k \geq 0$ , then next point will be  $(x_k + 1, y_k + 1)$  and  $P_{k+1} = P_k + 2(dy - dx)$ .

Step V: Repeat the process until we get  $(x_1, y_1)$ .

**Objective**

- Main Objective**: To extract the page boundary, identify page area and remove the page borders of the old age highly degraded handwritten original archaic Modi document images.
- Challenges**:
  - Asymmetric size and shape of borders and page.
  - Miscellaneous colors of border and page.
  - Non-uniform gray levels of border and page area.
  - Non-uniform existence of the page borders.
- Major Problems**:
  - The page border connectivity with text or text area.
  - Variable gray levels exist between document image background, border and foreground.

Below the presentation slide, a table titled "Dataset Division" is shown:

Sr. No	Class	Number of Images
