DWH integration

- ▶ The warehouse is organized around the major subjects of the enterprise (e.g. customers, products, and sales) rather than the major application areas (e.g. customer invoicing, stock control and product sales).
- ▶ This is reflected in the need to store decision-support data rather than application-oriented data.
- ▶ Data in the warehouse is not updated in real-time but is refreshed from operational systems on a regular basis. Daily/Monthly/Quarterly
- ▶ New data is always added as a supplement to the database, rather than a replacement.
