AISSMS
INSTITUTE OF INFORMATION TECHNOLOGY (IOIT)

ADDING VALUE TO ENGINEERING

An Autonomous Institute Affiliated to Savitribal Phule Pune University
Approved by AICTE, New Delhi and Recognised by Govt. of Maharashtra
Accredited by NAAC with "A+" Grade | NBA - 5 UG Programmes

Program - Electrical Engineering

Structure and Detailed Curriculum (UG Program)

Second Year B.TECH

(Effective from A. Y.: 2024-25)

AISSMS INSTITUTE OF INFORMATIONTECHNOLOGY
Kennedy Road, Near RTO,
Pune – 411 001, Maharashtra State, India Email:
principal@aissmsioit.org ,

CHAIRMAN
BOS–ELECTRICAL ENGINEERING
AISSMS IOIT (AUTONOMOUS),
PUNE-1

Institute Vision & Mission

Vision

To be recognized amongst top 10 private engineering colleges in Maharashtra by the year 2026 by rendering value added education through academic excellence, research, entrepreneurial attitude, and global exposure.

Mission

To enable placement of 150 plus students in the 7 lacs plus category & ensure 100% placement of all final year students

To connect with 10 plus international universities, professional bodies and organizations to provide global exposure to students

To create conducive environment for career growth, prosperity, and happiness of 100% staff.

To be amongst top 5 private colleges in Pune in terms of admission cut off.

Quality Policy

We commit ourselves to provide quality education & enhance our students quality through continuous improvement in our teaching and learning processes.

CHAIRMAN
BOS-ELECTRICAL ENGINEERING
AISSMS IOIT (AUTONOMOUS),
PUNE 1.

Department Vision & Mission

VISION

To be known for imparting quality education in the field of electrical engineering and preparing competent professionals with high human values to serve the society.

MISSION

- To train the graduates with the latest technologies through industry institute interactions and experiential teaching learning practices to meet the emerging global challenges.
- To enhance engineering skills, employability skills, and research through professional activities.
- To develop globally competent electrical engineers with professional ethics and commitment to society.

PROGRAM EDUCATION OBJECTIVES

Graduates will

- Investigate problems in electrical engineering and provide effective solutions.
- Excel in the professional career, research, higher studies, and entrepreneurship.
- Engage in lifelong learning by adapting a professional, social, and ethical attitude for contributing to societal needs.

Program Outcomes (POs)

1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. [Engineering knowledge]

2. Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. [Problem analysis]

3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. [Design/development of solutions]

4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. [Conduct investigations of complex problems]

5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations. [Modern tool usage]

6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. [The engineer and society]

7. Understandtheimpactoftheprofessionalengineeringsolutionsinsocietalandenvironmental contexts, and demonstrate the knowledge of, and need for sustainable development. [Environment and sustainability]

8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. [Ethics]

9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. [Individual and teamwork]

10. Communicateeffectivelyoncomplexengineeringactivitieswiththeengineeringcommunity and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. [Communication]

11. Demonstrateknowledgeandunderstandingoftheengineeringandmanagementprinciples and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. [Project management and finance]

12. Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. [Life-long learning]

Program Specific Outcomes (PSOs)

PSO 1: The graduates will be able to proficiently employ the software tools used in the design and analysis of electrical systems.

PSO2: The graduates will be able to acquire skills in electric mobility, power quality, and renewable energy.

A. Definition of Credit:

1 Hr. Lecture (L) per week	1 credit
1 Hr. Tutorial (T) per week	1 credit
1 Hr. Practical (P) per week	0.5 credits
2 Hours Practical (Lab)/week	1 credit

B. Range of credits –

A range of credits from 160 to 176 for a student to be eligible to get Undergraduate degree in Engineering. A student will be eligible to get Undergraduate degree with Honors and additional Minor Engineering if he/she completes an additional 20 credits.

C. Credit for Undergraduate Degree in Electrical Engineering

Second Year B.TECH			
Democracy, Election and Governance (IOHSM301)			
Course Code:	IOHSM301	**Credit**	2
Contact Hours:	2 Hrs./week (L)	**Type of Course:**	Lecture
Examination Scheme	Term-work 25 marks	Oral 25 marks	

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term-work	Internal	25
2.	Oral	External	25

Course Objectives:	
1	To introduce the students meaning of democracy and the role of the governance.
2	To help them understand the various approaches to the study of democracy and governance.

Course Outcomes: Students will be able to	
301.1	Know the meaning of democracy and the role of the governance in life.
301.2	Understand the various approaches to the democracy and governance.

Topics covered:		
UNIT I:	**Democracy**	**(5 hrs.)**
a. Constitution of India b. Evolution of Democracy- Different Models c. Dimensions of Democracy- Social, Economic, and Political		
UNIT II:	**Election**	**(5 hrs.)**
a. Indian tradition of decentralization b. History of panchayat Raj institution in the lost independence period c. 73rd and 74th amendments d. Challenges of caste, gender, class, democracy and ethnicity		
UNIT III:	**Governance**	**(5 hrs.)**
a. Meaning and concepts b. Government and governance c. Inclusion and exclusion		

Textbooks:	
1.	Banerjee-Dube, I. (2014). *A history of modern India*. Cambridge UniversityPress.

Second Year B.TECH (Semester III)			
Electrical Circuits Analysis (ELPCC302)			
Course Code:	**ELPCC302**	Credit	4
Contact Hours:	3 Hrs./week (L) 1 Hrs./week (Tut.)	**Type of Course:**	Lecture/Tutorial
Examination Scheme	In-sem. Evaluation 40 Marks	End-sem. Examination 60 Marks	

Prerequisite: -
Fundamental concept of basic Electrical Engineering, linear differential equations.

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	In-sem. Evaluation	Internal	**40**
2.	End-sem. Examination	External	**60**

Course Objectives:	
1	To introduce various methods of Circuits Analysis.
2	To demonstrate various theorems to simplify complex Electrical circuits.
3	To explain transient response of series circuits using classical methods and Laplace Transform approach.
4	To impart knowledge of laws and Network theory for analysis of 2-port networks and design of other circuits like filters.

Course Outcomes: Students will be able to	
302.1	Solve complex electrical circuits using various methods of Circuits Analysis.
302.2	Solve complex electrical circuits using various Network theorems.
302.3	Illustrate transient and steady state response of circuits.
302.4	Apply Laplace transform to analyse behaviour of an electrical circuit.
302.5	Evaluate two port network parameters
302.6	Evaluate network functions, and Design of filters.

Topics covered:		
UNIT I:	**Methods of Circuits Analysis**	**(6 hrs.)**
Terminology of electrical networks, Independent and dependent sources. Circuits Analysis by Mesh and Nodal approach in DC circuits (dependent and independent sources). Concept of Super mesh, Super node and Dot Convention in coupled circuits.		
UNIT II:	**Applications of Network Theorems**	**(6 hrs.)**
Thevenin's theorem, Norton's theorem, Superposition theorem, Maximum Power Transfer theorem for DC and AC Circuits with independent and dependent sources. Millman's theorem, Reciprocity theorem for DC circuits.		

CHAIRMAN
BOS-ELECTRICAL ENGINEERING
AISSMS IOIT (AUTONOMOUS),
PUNE-1.

UNIT III:	Analysis of Transient Response (Differential Equation Approach)	(6 hrs.)

Introduction to first order and second order differential equations. Behaviors of network elements under switching condition and their representation, Solution of initial and final condition in series RL, RC and RLC networks using DC sources.

UNIT IV:	Laplace Transform and its Application	(6 hrs.)

Introduction to Laplace transform, properties of Laplace transform, Inverse Laplace transform, Analysis of transient and steady state response of series RL, RC and RLC network with and without initial conditions.

UNIT V:	Two port Network	(6 hrs.)

Two port parameters: Open circuit, short circuit, transmission and hybrid Parameters, relationships between parameter sets, parallel connection of two port networks.

UNIT VI:	Network Functions and Filters	(6 hrs.)

Network functions: Network functions for one port and two-port networks, driving point and transfer functions, poles and zeros of network functions, restrictions on Pole and zero locations for driving point functions and Transfer functions, time domain behavior from pole - zero plot.

Filters: Classification of filters, characteristics impedance and propagation constant of pure reactive network, Ladder network, T-section, π-section of low pass filters.

List of Tutorials: (Minimum 8 Tutorials)

1. Determine the current using mesh and nodal analysis for AC networks with independent sources with dependent and for DC networks with dependent sources.
2. Determine Thevenin's equivalent circuit and Norton equivalent circuit of AC networks.
3. Determine the current in AC networks independent sources and DC networks with dependent using Superposition Theorem.
4. Find the load impedance of network delivering Maximum Power to the load. Also, determine amount of Maximum Power.
5. Determine the current in load impedance by Millman's Theorem.
6. Identify tree and co-tree of DC and AC networks.
7. Determine the current in series RL, RC and RLC circuit by using Transient Response.
8. Find the current flowing through and voltage across circuit element using Laplace Transform approach. Also, find their initial and final value.
9. Determine the Impedance, Admittance, ABCD and Hybrid parameters of the network.
10. Determine and plotting pole zero from transfer function.
11. Design T-section and π-section of Low Pass Filter (LPF).

Second Year B.TECH			
Electrical Measurements (ELPCC303)			
Course Code:	ELPCC303	**Credit**	3
Contact Hours:	3 Hrs./week (L)	**Type of Course:**	Lecture
Examination Scheme	In-sem. Evaluation 40 Marks	End-sem. Examination 60 Marks	

Prerequisite: -

Fundamental concepts, various laws-principles and theorems related to electrical systems, Introduction to resistance, inductance, capacitance. Basic knowledge of current, voltage, power, energy, and frequency.

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	In-sem. Evaluation	Internal	40
2.	End-sem. Examination Practical or Activity based Evaluation	External	60

Course Objectives:	
1	To explain fundamental concepts of measurement.
2	To explain the concepts of instrument transformers and meters and procedure to map the relevant standards.
3	To demonstrate the configuration and setup of digital meters to measure the electrical parameters.
4	To discuss different communication technologies and explain the process of collecting data from the digital/smart meters.
5	To introduce advanced instruments and demonstrate different software tools.

Course Outcomes: Students will be able to:	
303.1	Explain the fundamental concepts of the measurement.
303.2	Use instrument transformers, multimeter/panel meters/clamp meters and map relevant standards.
303.3	Configure/set up digital meters and measure electrical parameters.
303.4	Select appropriate communication technology to log data from the digital/smart meters.
303.5	Use relevant software tools to prepare the basic report from the data received from digital/smart meters.

Topics covered:		
UNIT I:	**Fundamentals of Measurement**	**(6 hrs.)**

SI System of measurement, Concept of Static Dynamic Characteristics of Measuring Instruments, Types of Error in Measuring Instruments, Review of electromechanical measurements (Generic principle of conventional electro dynamometer theory).
Measurement of other parameters: temperature, pressure, solar radiation, wind etc.

UNIT II:	Use of Instrument Transformers and Study of Standards	(6 hrs.)

Applications of Instrument transformers [BIS ETD 34], Types and use of i. Multimeter ii. Panel meters [Basic/Multifunction] iii. Clamp meters, Calibration of meters.

Study of BIS / IEEE / IEC standards [BIS ETD 12 & 13 Standards, IEEE 1459-2010, IEEE P120]

UNIT III:	Measurement of Basic Electrical Parameters	(6 hrs.)

Digital meters – Basics, Block diagram, ADC, sampling, Connections, Setup and Configuration.
Measurement of [using digital meters]
- R, L and C.
- voltage, current [True RMS], PF, and Frequency.
- Insulation, Earth resistance – Megger, Earth clamp meter.
- Earth Loop Impedance measurement

UNIT IV:	Measurement of Power & Energy	(6 hrs.)

Measurement of Power – Single phase, multi-phase, balanced and unbalanced, active, reactive, and apparent power.
Measurement of Energy – Single phase, multi-phase, four quadrant theory, active, reactive, and apparent energy. 1-phase utility energy meter, 3-phase utility meter (LT and HT).

UNIT V:	Modern Communication Technologies and Systems	(6 hrs.)

Data Acquisition & Virtual Instrumentation Communication – RS 485, Ethernet, Wi-Fi.
Datalogger, Energy monitoring system. Digital Transient measurements and analysis with an introduction to the measurement of pre-during-post event cycles and the concept of the trigger.

UNIT VI:	Introduction to Advanced Instruments and Software	(6 hrs.)

Advanced meters – Power Quality Analyzer, Portable Appliance Testing (PAT), Electrical Installation tester, Thermal Imaging, Maximum Demand Controller
Introduction to software – LabVIEW, Smart Meter software (Fluke Energy Analyze Plus, Janitza GridVis), Microsoft Excel, Microsoft Power BI.

Second Year B.TECH			
Analog and Digital Circuits (ELPCC304)			
Course Code:	ELPCC304	**Credit**	3
Contact Hours:	3 Hrs./week (L)	**Type of Course:**	Lecture
Examination Scheme	In-sem. Evaluation 40 Marks	End-sem. Examination 60 Marks	

Prerequisite: -
Basic Electrical and Electronics engineering

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	In-sem. Evaluation	Internal	**40**
2.	End-sem. Examination	External	**60**

Course Objectives:	
1	To explain use of K map for Boolean algebra reduction and design digital circuit.
2	To explain sequential and combinational circuits using flip flops and K map.
3	To impart knowledge of operational Amplifier and its applications.
4	To explain the concept of transistor as amplifier and its operations.

Course Outcomes: Students will be able to:	
304.1	Use different number systems and simplify Boolean expressions using Boolean algebra and K map
304.2	To design and implement combinational circuits
304.3	To design sequential circuits and compare various sequential circuits
304.4	To explain types of multistage transistor amplifier circuits
304.5	Explain basics of OPAMP and open and closed loop configuration of OPAMP with applications
304.6	Explain the use of OPAMP in signal generation and active filter circuits , also applications of IC555 and voltage regulator ICs

Topics covered:		
UNIT I:	**Digital Fundamentals**	**(6 hrs.)**
Numbering systems-binary, octal, decimal and hexadecimal and their conversion, Binary and Decimal Codes, Binary arithmetic: - addition and subtraction by 1's and 2's compliment. Booleans algebra, De-Morgan's theory-map: - structure for two, three and four Variables, Sum Of Product (SOP) and Product of Sum (POS) form reduction of Boolean expressions by K-map.		
UNIT II:	**Combinational Circuits**	**(6 hrs.)**
Adder, Subtractor, Binary parallel adder, 4-Bit parallel subtractor, Serial adder, BCD adder, Code converters, Comparators, Encoders, Priority Encoder, Decoder.		
UNIT III:	**Sequential Circuits**	**(6 hrs.)**
Types of Flip flop, Edge Triggered flip flop, applications of flip-flops, Registers, shift registers and its applications, serial to parallel converter, parallel to serial converter, Counters, Counter design Using flip-flops.		

UNIT IV:	Bipolar Junction Transistor (BJT) & Applications	(6 hrs.)

BJT amplifier: Introduction, Class A amplifier, AC-DC load line analysis, Single stage and Multistage BJT amplifier, direct coupled, RC coupled, and transformer coupled, Darlington pair, Push-Pull amplifier and differential amplifier.

UNIT V:	Operational Amplifier	(6 hrs.)

Op-Amp: Block diagrams of 741, ideal and practical parameters, open loop and close loop configuration of Op-Amp. Applications of Op-Amp- Comparator, Schmitt trigger, zero crossing detectors, V-I and I-V converters, Instrumentation amplifier, peak detector.

UNIT VI:	Waveform generation and DC Voltage regulators	(6 hrs.)

Waveform generation using Op-amp - sine, square, saw tooth and triangular generator, Active filters-Its configuration with frequency response, Analysis of first order low pass and high pass filters, IC 555 – construction, working and modes of operation- Astable and mono stable multi vibrators, Sequence generator voltage regulators using ICs 78xx, 79xx,LM 317 .

Power System Engineering (ELPCC305)

Course Code:	ELPCC305	Credit		3
Contact Hours:	3 Hrs./week (L)	Type of Course:		Lecture
Examination Scheme	In-sem. Evaluation 40 Marks	End-sem. Examination 60 Marks		

Prerequisite: -
1. Knowledge of fundamentals of electrical circuit components and engineering mathematics.
2. Power and energy calculation

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	In-sem. Evaluation	Internal	40
2.	End-sem. Examination	External	60

Course Objectives:	
1	To introduce the different conventional and nonconventional power generation plants.
2	To explain the basic structure of electrical power systems and different electrical terms related to them.
3	To discuss the components of overhead lines and the procedure to calculate line sag, and string efficiency.
4	To discuss concepts of resistance, inductance, and capacitance of transmission lines and their impact on the performance of lines.
5	To discuss the classification of transmission lines and explain the procedure to estimate the performance of transmission lines.

Course Outcomes: Students will be able to:	
305.1	Identify components and explain the working principle of conventional and nonconventional power generation plants.
305.2	Calculate factors associated with generating station and draw the load curve.
305.3	Explain components of overhead lines and calculated line sag, and string efficiency.
305.4	Calculate the resistance and inductance of different transmission line configurations.
305.5	Calculate the inductance and capacitance of different transmission line configurations.
305.6	Analyze the performance of short and medium transmission lines.

Topics covered:		
UNIT I:	Introduction to Electrical Power Generation	(8 hrs.)
Thermal, Hydro, nuclear, diesel & gas power generation (Limited to block diagrams). Introduction to renewable energy sources, Concept of cogeneration and captive generation. Introduction to Indian National Power Grid, Load Dispatch Center (LDC).		

CHAIRMAN
BOS-ELECTRICAL ENGINEERING
AISSMS IOIT (AUTONOMOUS),
PUNE-1.

UNIT II:	Introduction to Electrical Power Systems	(8 hrs.)

Structure of Electrical Power System, different factors associated with generating stations (Such as connected load, maximum demand, demand factor, average load, load factor, diversity factor, plant capacity factor, reserve capacity, plant use factor).

Load curve, load duration curve, concept of base load and peak load stations, Interconnected grid system. Various systems of transmission of electric power, choice of working voltage for transmission.

UNIT III:	Overhead Lines and Insulators	(8 hrs.)

Main components of overhead lines, Line supports, conductor spacing, length of span, calculation of sag for equal and unequal supports and effect of ice and wind loadings. Statutory rules & Indian electricity rules, High Temperature and Low Sag (HTLS) conductor.

Types of insulators, voltage distribution along string of suspension insulators, string efficiency, equalization of potential across each unit, method of improving string efficiency, insulator failure, testing of Insulators. Relevant Standards.

UNIT IV:	Resistance, Inductance of Transmission Line	(8 hrs.)

Resistance of transmission line, skin effect and its effects, proximity effect.

Internal & external flux linkages of single conductor, inductance of single phase two wire line, inductance of three phase line with symmetrical and unsymmetrical spacing, concept of G.M.R. and G.M.D, necessity of transposition

UNIT V:	Capacitance of Transmission Line	(8 hrs.)

Electric potential at single charged conductor, potential at conductor in a group of charged conductors, capacitance of single-phase line, Capacitance of single phase line with effect of earth's surface on electric field, Concept of G.M.R. and G.M.D for capacitance calculations, capacitance of three phase line with symmetrical and unsymmetrical spacing.

UNIT VI:	Performance of Transmission Lines	(8 hrs.)

Classification of lines based on length and voltage levels. Performance of short transmission line with voltage current relationship and phasor diagram, Representation of medium lines as 'Nominal Pi' and 'Nominal Tee' circuits using R, L and C parameters. Ferranti effect,

Representation of 'Tee' and 'Pi' models of lines as two port networks, evaluation and estimation of generalized circuit constants (ABCD) for short and medium lines, Estimation of Efficiency & regulation of short & medium lines.

Industrial Visit: Visit to HV/EHV substation.

Second Year B.TECH (Semester III)			
Electrical Circuits Analysis Lab (ELPCC307)			
Course Code:	ELPCC307	**Credit**	1
Contact Hours:	2 Hrs./week (Pr.)	**Type of Course:**	Practical
Examination Scheme	Term Work 25 Marks	Practical. Examination 50 Marks	

Prerequisite: -
Fundamental concept of basic Electrical Engineering, linear differential equations.

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term Work. Evaluation	Internal	25
2.	Practical. Examination	External	50

Course Objectives:	
1	To demonstrate various methods and theorems to simplify complex Electrical circuits.
2	To demonstrate the Transient response of the circuits in time domain.
3	To demonstrate the behaviour of the circuit's response using a software
4	To explain the significance of network functions.

Course Outcomes: Students will be able to:	
307.1	Verify network theorems experimentally.
307.2	Illustrate transient response of RL, RC and RLC series circuit using simulation software.
307.3	Evaluate parameters of two port networks.
307.4	Design low pass and high pass filters using software.

List of Experiment: (Perform any 8 Experiments)
1. Verification of Kirchhoff's current law and voltage law for DC as well as AC Circuit.
2. Verification of super position theorem for DC as well as AC Circuit.
3. Verification of maximum power transfer theorem for AC circuit.
4. Verification of Thevenin's theorem for AC circuit.
5. Verification of Norton's theorem for AC circuit.
6. Study of transient response of RL and RC circuit using MATLAB/ Pspice.
7. Study of transient response of series RLC circuit using MATLAB/ Pspice.
8. Experimental Determination of Z and Y parameters of Two Port Network.
9. Study of High pass and Low pass filter using MATLAB/ Pspice.
Experiments on Virtual Laboratory [Optional]
1. Verification of Norton Theorem
2. Verification of Thevenin Theorem
3. Verification of Superposition Theorem
4. Verification of Millman's Theorem
5. R-L-C Circuit Analysis
6. Verification of Reciprocity Theorem
7. Verification of Maximum Power Transfer Theorem

Second Year B.TECH			
Electrical Measurements Lab (ELPCC308)			
Course Code:	ELPCC308	**Credit**	**1**
Contact Hours:	2 Hrs./week (Pr.)	**Type of Course:**	Practical
Examination Scheme	Term Work 25 Marks		

Prerequisite: -

Fundamental concepts, various laws-principles and theorems related to electrical systems, Introduction to resistance, inductance, capacitance. Basic knowledge of current, voltage, power, energy, and frequency.

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term Work. Evaluation	Internal	25

Course Objectives:	
1	To demonstrate parts of electromechanical meters.
2	To explain the concepts and connections of instrument transformers and meters and procedure to map the relevant standards.
3	To demonstrate the configuration and setup of digital meters to measure the electrical parameters.
4	To demonstrate different communication technologies and the process of collecting data from the digital/smart meters.
5	To demonstrate advanced instruments and different software tools.

Course Outcomes: Students will be able to:	
308.1	Select and use instrument transformers.
308.2	Configure/set up and use instruments / digital meters to measure electrical parameters.
308.3	Select appropriate communication technology to log data from the digital/smart meters.
308.4	Use relevant software tools to prepare the basic report from the data received from digital/smart meters.

List of Experiments:
Basic Experiments [Compulsory]

1. Demonstration of parts (by dismantling the meter) of various electromechanical meters. Explanation of symbols & notations used on instruments.
2. Selection and use of CT & PT for digital meters.
3. Measurement of basic electrical parameters using multimeters, panel meters, and clamp meters.
4. Measurement of earth loop impedance
5. Measurement of insulation resistance/ earth resistance.
6. Measurement of Power - Single phase, multi-phase, balanced and unbalanced, active, reactive, and apparent power.
7. Measurement of Energy – Single phase, multi-phase, four quadrant theory, active, reactive, and apparent energy. 1-phase utility energy meter, 3-phase utility meter.
8. Collection of digital meter data using RS485/Ethernet/WiFi (datalogger/PC) and analyzing it using software.

Advanced Experiments [Optional]

1. Measurement of parameters using Power Quality Analyzers.
2. Testing of home appliances using Portable Appliance Testers (PAT).
3. Use of Electrical Installation tester.
4. Thermography of Electrical installation. Configuration and using Maximum Demand Controller.
5. Analysis of electrical measurement data using software.

Second Year B.TECH			
Analog and Digital Circuits Lab (ELPCC309)			
Course Code:	ELPCC309	Credit	1
Contact Hours:	2 Hrs./week (Pr.)	Type of Course:	Practical
Examination Scheme	Term Work 25 Marks	Practical. Examination 25 Marks	

Prerequisite: -
Basic Electrical and Electronics engineering

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term Work. Evaluation	Internal	25
2.	Practical. Examination	External	25

Course Objectives:	
1	To familiarise students with digital electronics laboratory, ICs ,concept of VCC and ground.
2	To prepare students to design various digital and analog circuits using OPAMPS.
3	To teach students to implement the designed digital as well as analog circuits.

Course Outcomes: Students will be able to:	
309.1	Read the datasheets of various ICs.
309.2	Design simple digital electronics circuits and circuits using OPAMP
309.3	Implement the circuits and verify the results

List of Experiments:

Experiment 1 is compulsory and perform any 7 experiments from 2 to 13

1. Introduction to digital electronics lab- nomenclature of digital ICs, specifications, study of the data sheet, concept of Vcc and ground, verification of the truth tables of logic gates using TTL ICs.
2. Implementation of the given Boolean function using logic gates in both SOP and POS forms.
3. Implementation of Adder and Subtractor circuits.
4. Design logical circuit to convert binary to EXCESS 3/Gray number system
5. Counters: Design and implementation of 3-bit modulo counters as synchronous and Asynchronous types using FF IC's and specific counter IC.
6. Design 2:4 / 3:8 decoder for binary to octal decoding.
7. Find phase angle difference between the same frequency signal using ZCD and AND gate.
8. Design of comparator and Schmitt trigger.
9. Design sine and square wave generator.
10. Design first order high pass and low pass filter using OP AMP IC741
11. Design of monostable muti vibrator using IC555 and digital circuit to count number of pulses.
12. Design astable multivibrator using IC-555.
13. Design a small signal voltage amplifier, plot its frequency response and obtain bandwidth.

Second Year B.TECH			
Audit Course 3 - Vedic Mathematics (IOHSM3AC)			
Course Code:	IOHSM3AC	**Credit**	1
Contact Hours:	1 Hrs./week (L)	**Type of Course:**	Lecture
Examination Scheme	Term Work 25 Marks		

Prerequisite: -
1. Vedic Sutras, Vedic Sub Sutras.

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term Work	Internal	25

Course Objectives:	
1	To develop the understanding of Techniques/Sutras to solve mathematical arithmetic's in easy and faster way and use these techniques to varies Competitive Examinations.
2	To Improve speed and efficiency to solve even the most complex Mathematical problems.
3	To remove the phobia about mathematics in the minds of Students.
4	To help students to have better command over mathematical concepts and boost up their self-confidence level towards the subject.

Course Outcomes: Students will be able to:	
310.1	Apply Vedic Mathematics techniques to Perform quickly and accurately mathematical calculations like multiplication, division, squares, cubes, LCM, HCF.
310.2	Apply Vedic Mathematics techniques to solve Linear Equations, Quadratic Equations, Factorization of a Cubic Polynomial.
310.3	Apply Vedic Mathematics techniques to Perform calculations in Coordinate Geometry, Differentiation, Integration and Trigonometry without relying heavily on calculators or written methods.

Topics covered:		
UNIT I:	**Basic Level**	**(4 hrs.)**
Introduction of Vedic Mathematics, Multiplication, Square, Cube, Divisibility Test, Highest Common Factor of Polynomials, Multiplication of Polynomials, Division of Polynomials,		
UNIT II:	**Intermediate Level**	**(4 hrs.)**
Linear Equations, Quadratic Equations, Factorization of a Cubic Polynomial, Magic squares, Dates and Calendar.		
UNIT III:	**Advance Level**	**(4 hrs.)**
Determinant, Coordinate Geometry, Differentiation, Integration, Trigonometry.		

	Textbooks:
1	Advanced Vedic Mathematics, Rajesh Kumar Thakur.
2	Vedic Mathematics Made Easy, DhavalBathia
3	VEDIC MATHEMATICS for Students: LEVEL – 1 OF 5 SERIES, by Nava Vision
	Reference Books:
1	Sri Bharatikrishna Tirthaji," Vedic Mathematics",Published by MotilalBanarsidass, 1965.ISBN 81-208-0163-6.
2	Williams K.R. "Discover Vedic Mathematics" Vedic Mathematics Research Group, 1984.ISBN 1-869932-01-3.
3	Wiliams K.R. and M.Gaskell "The Cosmic Calculator". MotilalBanarsidass ,2002.ISBN 81-208-1871-7.

Second Year B.TECH			
Industrial Management (ELHSM401)			
Course Code:	ELHSM401	Credit	2
Contact Hours:	2 Hrs./week (L)	**Type of Course:**	Lecture
Examination Scheme	Term Work 25 Marks	Oral Examination 25 Marks	

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term Work Evaluation	Internal	25
2.	Oral Examination	External	25

Course Objectives:	
1	To explain the principles of management and the fundamentals of economics and Management.
2	To make students aware about the basic concepts of human and industrial relationships, professional ethics and the importance of leadership skill and motivation.
3	To explain the fundamentals of Human Resource management and Entrepreneurship.
4	To enhance problem solving skills by collaborative / team learning
5	To imbibe employability and entrepreneur skills.

Course Outcomes: Students will be able to:	
401.1	Explain fundamentals of economics and management and compare different types of business organization.
401.2	Develop skills to manage human resources and ensure workplace safety and compliance with regulations.
401.3	Acquire knowledge of quality management tools and techniques for planning, executing, and closing projects.
401.4	Develop strategic thinking and planning skills to create competitive advantages for industrial enterprises.

Topics covered:		
UNIT I:	**Principles of Management**	**(6 hrs.)**

Management: Meaning, scope and its importance. Difference between administration and management. Types of business ownership: Sole proprietorship, Partnership (Act 1934), LLP (Limited Liability Partnership), (Act2008). Joint Stock Company: Public Limited and Private Limited, Public-Sector Undertaking (PSU)

Managerial Economics: Demand and Supply concept and the law, Elasticity of demand and supply,

Sustainable development Goals (SDG): Introduction and Implementation. Structure of goals, targets and indicators.

UNIT II:	**Human Resource Management**	**(6 hrs.)**

a. Human and Industrial Relations: Human relations and performance in organization. Understand self and others for effective behavior. Industrial relations and disputes. Relations with subordinates' peers and superiors. Characteristics of group behavior, handling of grievances. HR planning. Recruitment, selection, training and development.

b. Professional Ethics:

Concept of ethics and professionalism. Need and Code of professional ethics. Typical problems of professional engineers.

UNIT III:	Quality Management	(6 hrs.)

Quality Management

Definition of Quality Management:

Assistance Tools: Ishikawa diagram – Pareto Analysis. Pokka Yoke (Mistake Proofing) quality circles, Kaizen. TQM, 5S (Case study of Toyota). Six-Sigma, The ISO 9001:2015 Quality Management System Standard- The ISO 14001:2015. Environmental Management System Standard (SDG 13)

UNIT IV:	Leadership, Human Resource and Entrepreneurship	(6 hrs.)

Introduction to Motivation, theories of work motivation: Maslow Hierarchy of needs theory (SDG 1,2 ,3,6,8), Theory X, Theory Y. Herzberg's two factor theory. (SDG 8)

Group dynamics: stages of group dynamics.

Leadership- Laissez-faire, importance, qualities of good leadership.

Entrepreneurship- Definition, concept, traits, qualities of entrepreneur. Incentives for small business development, Government policies and incentives.

Textbooks:

1. Industrial Engineering and Management by TR Banga.
2. Industrial Engineering and Management by OP Khanna, Dhanpat Rai Publications, Delhi
3. Industrial Management by VK Sharma, OP Harkut.
4. Environmental and Pollution Awareness: Satya Prakashan, New Delhi.
5. Thakur Kailash, Environment Protection Law & Policy in India: Deep & Deep publication, New Delhi.
6. Handbook of Small-Scale Industry by P.M. Bhandari.
7. Marketing Management by Philip Kotler, Prentice Hall of India, New Delhi
8. Principles of Management by Philip Kotler, TEE Publication.
9. Industrial Organization and Management by Tara Chand, Nem Chand and Brothers, Roorkee

Reference Books:

1. C. B. Mamoria and V.S.P.Rao- Personnel Management, Himalaya Publishing House, 30th Edition 2014
2. Harold Koonlz and O D'onnel – Management.McGrawHill Publication 1980
3. Philip Kotler- Marketing Management. Pearson Edition 2008 [R4] Robert Heller, Managing Teams, Dorling Kindersley, London
4. Kelly John M, Total Quality Management, InfoTech Standard, Delhi
5. Joseph M. Juran Juran's Quality Handbook TATA McGraw-Hill.

CHAIRMAN
BOS-ELECTRICAL ENGINEERING
AISSMS IOIT (AUTONOMOUS),
PUNE-1.

Second Year B. TECH			
Computational Techniques (ELPCC402)			
Course Code:	ELPCC402	**Credit**	3
Contact Hours:	3 Hrs./week (L)	**Type of Course:**	Lecture
Examination Scheme	In-sem. Evaluation 40 Marks	End-sem. Examination 60 Marks	

Prerequisite: -
1. Differentiation and integration of a single real variable, ordinary differential equations.
2. Programming and Problem solving.
3. Linear Algebra.
4. Programming language basics

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	In-sem. Evaluation	Internal	40
2.	End-sem. Examination	External	60

Course Objectives:	
1	To emphasize the need of computational techniques and analyse errors involved in the computation.
2	To provide sound knowledge of various numerical methods.
3	To explain various numerical methods to obtain solution of different types of equations such as transcendental, simultaneous, ODE etc. and for interpolation, integration, and differentiation.
4	To impart skills to develop algorithms and programs for various numerical methods.

Course Outcomes: Students will be able to:	
402.1	Demonstrate types of errors in computation and their causes of occurrence.
402.2	Calculate root of algebraic and transcendental equations using various methods.
402.3	Apply numerical methods for various mathematical problems such as interpolation, numerical differentiation.
402.4	Solve linear simultaneous equation using direct and indirect method.
402.5	Apply numerical methods for various mathematical problems such as integration and ordinary differential equation.
402.6	Develop algorithms and write computer programs for various numerical methods

Topics covered:		
UNIT I:	**Introduction to Python**	**(6 hrs.)**
Variables, Strings, Tuples and Lists, Operators, Conditionals, Loops, Type conversion, Reading Input, Printing output, Functions, and modules.		
UNIT II:	**Errors and Concept of Root of equation**	**(6 hrs.)**
Errors: Different types of errors, causes of occurrence and remedies to minimize them. Generalized error formula. **Concept of roots** of an equation. Descartes' rule of signs, Intermediate value theorem.		
UNIT III:	**Roots of equations:**	**(6 hrs.)**

Intermediate value theorem. Algebraic Equation: Bisection method, Regular-Falsi method, Newton-Raphson method. Newton Raphson method for 2 variables.

Application: Analysis of electrical circuits using above methods.

UNIT IV:	Interpolation and Numerical Differentiation	(6 hrs.)

Interpolation: Difference operators, Introduction to interpolation - Newton's forward, backward interpolation formulae, Stirling's, and Bessel's central difference formulae (Only Numerical), Newton's divided difference formula, Lagrange's interpolation. Numerical Differentiation using Newton's forward and backward interpolation formulae (Only Numerical)

UNIT V:	Linear Simultaneous algebraic equations	(6 hrs.)

Numerical Solution of a system of linear equation: Gauss elimination method,
Matrix Inversion, LU Factorization method, Gauss Jacobi method, Gauss Seidel method
Application: solving resistive networks

UNIT VI:	Numerical Integration and solution of differential equations	(6 hrs.)

Numerical solution of ordinary differential equation: Taylor's series method, Euler's method, Runge-kutta method – 4th order, Numerical Integration: Trapezoidal, Rule, Simpson's 1/3 Rule,
Application: Calculation of RMS values

CHAIRMAN
BOS-ELECTRICAL ENGINEERING
AISSMS IOIT (AUTOMOMOUS),
PUNE-1.

Second Year B.TECH			
DC and Induction Machines (ELPCC403)			
Course Code:	ELPCC403	Credit	03
Contact Hours:	3 Hrs./week (L)	Type of Course:	Lecture
Examination Scheme	In-sem. Evaluation 40 Marks	End-sem. Examination 60 Marks	

Prerequisite: -
Engineering Physics, Fundamental concepts and Laws related to electromagnetic induction

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	In-sem. Evaluation	Internal	40
2.	End-sem. Examination	External	60

Course Objectives:	
1	To impart knowledge about DC machine, power flow in DC machine and to introduce the concept of armature reaction.
2	To introduce fundamental concepts related to Electrical Machines and impart knowledge related to Transformer types, equivalent circuit formation and analysis, testing of transformer for determining performance parameters.
3	To explain parallel operation of transformers and various three phase transformer configurations, special transformers.
4	To introduce concept of rotation magnetic field in three phase induction motor and to study and analyse power flow, performance parameters of three phase induction motor.
5	To impart knowledge about various characteristics, starting methods, testing of three phase induction motor, computation of various parameters from circle diagram.
6	To explain fundamental concepts related to BLDC Motor.

Course Outcomes: Students will be able to:	
403.1	Classify DC motors, explain various performance characteristics of DC motors and evaluate the performance parameters of DC motor.
403.2	State classification of transformers, develop equivalent circuit and evaluate parameters of equivalent circuit, performance parameters of transformer using experimentation data.
403.3	Explain parallel operation and various configurations of three phase transformer.
403.4	Explain rotating magnetic field concept, constructional details of three phase induction motor and evaluate parameters of equivalent circuit, power flow stages.
403.5	Relate transformer –induction motor and analyse the performance of three phase induction motor by plotting circle diagram.
403.6	Explain fundamental concepts of BLDC Motor.

Topics covered:		
UNIT I:	**D.C. Machines**	**(6 hrs.)**
Motoring action, significance of back E.M.F torque equation, working at no-load and on-load. Losses, power flow diagram and efficiency. Descriptive treatment to armature reaction. Compensation methods for armature reaction. Characteristics and applications of D.C. Shunt and Series Motors, speed control of various types of DC motors, Descriptive treatment to different conducting, magnetic, insulating materials used in DC machines		
UNIT II:	**Single Phase Transformer**	**(6 hrs.)**
Single phase Transformer: Concept of ideal transformer. Practical transformer - Useful and leakage flux, its effects. Resistance, leakage reactance and leakage impedance of transformer windings & their effects on voltage regulation and efficiency. Exact and approximate equivalent circuits referred to L.V. and H. V. side of the transformer. Phasor diagrams for no-load and on load conditions. Open circuit and short circuit tests, determination of equivalent circuit parameters from the test data and determination of voltage regulation and efficiency. Transformer ratings. Losses in a transformer, their variation with load, voltage & Frequency on no load losses Efficiency and condition for maximum efficiency. Polarity test, Parallel operation of single-phase transformers, conditions to be satisfied, load sharing under various conditions. Power transformer and distribution transformer. All day Efficiency. Autotransformers, their ratings, and applications. Comparison with two winding transformers with respect to saving of copper and size. & Welding Transformer.		
UNIT III:	**Three Phase Transformers**	**(6 hrs.)**
Standard connections of three phase transformers and their suitability for various applications, voltage Phasor diagrams and vector groups. Descriptive treatment of Parallel operation of three phase transformers Scott connection and V connections. Three winding (tertiary windings) transformers. Testing of transformer as per relevant standards. Descriptive treatment to different conducting, magnetic, insulating materials used in transformer.		
UNIT IV:	**Three Phase Induction Motor**	**(6 hrs.)**
Production of rotating mmf by 3-phase balanced voltage fed to a symmetrical 3-phase winding. Construction: Stator, Squirrel cage & wound rotors. Principle of working, simplified theory with constant air gap flux; slip, frequency of rotor emf and rotor currents, mmf produced by rotor currents, its speed w.r.t. rotor and stator mmf. Production of torque, torque slip relation, condition for maximum torque, torque-slip Characteristics, effect of rotor resistance on torque-slip characteristics. Relation between starting torque, full load torque and maximum torque. Losses in three phase induction motor, power-flow diagram. Relation between rotor input power, rotor copper loss & gross mechanical power developed, efficiency. Descriptive treatment to different conducting, magnetic, insulating materials used in induction motor. Energy efficient induction motor		
UNIT V:	**Performance Analysis of Three Phase Induction Motor**	**(6 hrs.)**
Induction motor as a generalized transformer; phasor diagram. Exact & approximate equivalent circuit. No load and blocked rotor tests to determine the equivalent circuit parameters and plotting the circle diagram. Computation of performance characteristics from the equivalent circuit and circle diagram. Performance curves. Necessity of starter for 3-phase induction motors. Starters for slip-ring and cage rotor induction motors; stator resistance starter, auto transformer starter, star delta starter and rotor resistance starter. D.O.L. starter and soft starting, with their relevant torque and current relations. Comparison of various starters, testing of three phase induction motor as per relevant standards.		

UNIT VI:	Brushless D.C. Motors	(6 hrs.)

Construction, principle of working, types, characteristics, ratings, applications, brushless dc motor control, comparison between BLDC motor and brushed DC motor, Comparison between BLDC Motor and AC Induction Motor

Textbooks:

Microcontroller & Integrated Circuit based Application (ELPCC404)

Course Code:	ELPCC404	Credit		3
Contact Hours:	3 Hrs./week (L)	Type of Course:		Lecture
Examination Scheme	In-sem. Evaluation 40 Marks	End-sem. Examination 60 Marks		

Prerequisite: -
Fundamentals of Digital Electronics
Basic Knowledge of combinational and sequential logic circuits.

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	In-sem. Evaluation	Internal	**40**
2.	End-sem. Examination Practical or Activity based Evaluation	External	**60**

Course Objectives:	
1	To explain the architecture of the 8051 microcontroller.
2	To discuss embedded programming concepts.
3	To explain the serial port and interrupts of 8051.
4	To discuss Arduino and its programming.
5	To discuss interfacing of I/O devices with 8051/Arduino.

Course Outcomes: Students will be able to:	
404.1	Explain the architecture and memory organization of the 8051 microcontroller.
404.2	Write simple programs in assembly and C language for 8051 microcontroller
404.3	Program the serial port and use the interrupts of the 8051 microcontroller.
404.4	Program Arduino and interface simple I/O Devices
404.5	Interface various I/O devices with 8051/Arduino
404.6	Interface GSM/Bluetooth/ ZIGBEE devices with 8051/Arduino.

Topics covered:		
UNIT I:	**Architecture of 8051 Microcontroller**	**(6 hrs.)**
Introduction to concept of microcontroller, Memory organization of 8051, Program Status Word (PSW), Stack and Stack pointer. Ports of 8051. Overview of Instruction set of 8051.		
UNIT II:	**Programming of 8051 Microcontroller**	**(6 hrs.)**
Embedded C concepts, Variables and constants, Operators, Control Loops and Functions Loops Header and source files. 8051 Programming in C. Port programming of 8051 in C (Byte Level and Bit-level). Time delay programming in C.		
UNIT III:	**Serial port and interrupts of 8051.**	**(6 hrs.)**
Introduction to Serial port structure and Interrupt structure in 8051 and its programming.		

CHAIRMAN
BOS-ELECTRICAL ENGINEERING
AISSMS IOIT (AUTONOMOUS),
PUNE-1.

UNIT IV:	Introduction and programming of Arduino	(6 hrs.)

Introduction to ARDUINO. Programming in Embedded-C, Concepts of C language.
Interfacing and programming of LED and Switches to Arduino.

UNIT V:	Interfacing of I/O devices with Arduino	(6 hrs.)

Reading an Analog signal using Analog to Digital Converter.
Introduction of Sensors and actuators. Interfacing of sensors such as temperature, pressure, humidity, light sensor. Pulse width modulation technique and its use for controlling DC Motor.

UNIT VI:	Communication protocols	(6 hrs.)

Interfacing of 8051/Arduino with PC, Sending data to PC through Serial Monitor. Introduction to communication protocols such as GSM, Bluetooth communication. and ZIGBEE Wireless communication, Serial Peripheral Interface (SPI) and Inter-integrated circuit(I2C).

Textbooks:

1. Muhammad Ali Mazidi, J.G. Mazidi, "The 8051 Microcontroller and Embedded Systems", Pearsons Publishers
2. Han-Way Huang," Embedded System Design with C8051", Cengage Learning
3. "Getting Started with Arduino "Mazimo Banzi
4. "C programming for Arduino" Julien Bayle
5. "Learn to Program in Arduino™ C" William Osborne

Reference Books:

1. Scott Mackenzie, "8051 Microcontroller", Pearson Education.
2. Intel Microcontroller data book.
3. "Arduino Cookbook "O-Reilly Michael Margolis

Second Year B.TECH			
Power Electronics (ELPCC405)			
Course Code:	ELPCC405	**Credit**	3
Contact Hours:	3 Hrs./week (L)	**Type of Course:**	Lecture
Examination Scheme	In-sem. Evaluation 40 Marks	End-sem. Examination 60 Marks	

Prerequisite: -
Fundamental concept of electronics and electrical engineering.

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	In-sem. Evaluation	Internal	40
2.	End-sem. Examination	External	60

Course Objectives:	
1	To Describe basic theory of power semiconductor devices and their practical applications in power electronics.
2	To Explain concepts and operating principles of power electronics converters.
3	To Demonstrate performance of different converters.
4	To Calculate performance parameters of different converters for R, R-L & R-L-E loads
5	To Evaluate effect of change in the firing angle on the output parameters of converters.
6	To Compare different converter topologies.

Course Outcomes: Students will be able to:	
405.1	Describe basic theory of power semiconductor devices.
405.2	Develop characteristics of different power electronic switching devices.
405.3	Reproduce working principle of power electronic converters for different types of loads.
405.4	Analyse the performance and characteristics of power electronic converters.
405.5	Solve numerical to calculate performance parameters of different converters for R, R-L & R-L-E loads.
405.6	Compare different converter topologies.

Topics covered:		
UNIT I:	**Power Semiconductor Switches**	**(6 hrs.)**
Thyristor and Power Transistor family Devices (SCR, TRIAC, IGBT, MOSFET) - Construction, working, Static and dynamic Characteristics for SCR, Triggering Circuits (R, R-C, UJT), Commutation Circuits (class C & D) of SCR, Construction, working and Static Characteristics of TRIAC, IGBT and MOSFET.		
UNIT II:	**DC to DC converters**	**(6 hrs.)**
Working principle, classification on the basis of operating quadrants (A, B, C, D, E), Control techniques: CLC, TRC, PWM and FM Techniques, analysis of boost (step up) converter with RLE load, buck-boost converter (Descriptive Treatment), Numerical.

UNIT III:	Single Phase Controlled AC-DC Converters	(6 hrs.)
Classification of converters, Single phase half (semi) and fully controlled thyristor converters: Quadrants of operation, circuit configurations, working, performance parameters and input-output waveforms for R, R-L & R-L-E loads, Numerical based on output voltage and current calculations.		

UNIT IV:	Three Phase Controlled AC-DC Converters & AC-AC Converters (AC voltage controllers)	(6 hrs.)
A. **Three Phase Controlled AC-DC Converters** - Three phase fully controlled thyristor converters: circuit configurations, working, performance parameters and input-output waveforms for R & R-L-E loads, Numerical based on output voltage and current calculations. B. **Single phase AC Voltage Controller**- operation with R and RL Load, derivation of Average and RMS output voltage. Single phase cyclo-converter. (Descriptive treatment only).		

UNIT V:	DC – AC Converters (Inverters)	(6 hrs.)
Classification of inverters, single phase voltage source inverters, single phase current source inverter, single phase full bridge inverter (RLE Load), harmonics elimination methods of PWM (descriptive treatment only), three phase PWM Inverter, 120^0 and 180^0 mode of conduction.		

UNIT VI:	Multilevel Inverters	(6 hrs.)
Multi-level Inversion - concept, classification of multilevel inverters, Principle of operation, main features and analysis of Diode clamped and cascade H bridge multilevel inverters (5 level) ,sinusoidal PWM,

Second Year B. TECH			
Electrical Safety (ELVSE406)			
Course Code:	ELVSE406	**Credit**	3
Contact Hours:	1 Hrs./week (L) 4 Hrs./week (P)	**Type of Course:**	Lecture/ Practical
Examination Scheme	TW. Evaluation 50 Marks	PR Examination 50 Marks	

Prerequisite: -
1. Knowledge of basic concept of Electrical engineering.
2. Knowledge of main features of IE rules, 1956.
3. Knowledge of working of firefighting equipment's.

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term Work	Internal	50
2.	Practical Examination	External	50

Course Objectives:	
1	To make students aware about various aspects of electricity safety
2	To explain the general procedures of operation and maintenance of safety equipment.
3	To explain current rules and regulations as per Electricity Act 2003, related to electrical safety.

Course Outcomes: Students will be able to:	
406.1	Identify various protection schemes and circuit breakers
406.2	Develop skills in identifying the presence of electrical hazards
406.3	Demonstrate the importance of grounding Electrical Circuit.
406.4	Recognize different conductor clearances at various system voltages
406.5	Explain the operation and maintenance of firefighting equipment's.
406.6	Explain the working of Nitrogen Injection systems, fire alarm systems and high velocity water mist systems.

Topics covered:		
UNIT I:	**Overview of basic concepts**	**(02 hrs.)**
AC and DC supply, Fundamentals of electric power, Energy and Power factor, Circuit Breakers and Protective Relays, Basic Protection Schemes of Power Equipment's, interlocking of breaker and isolator, Lightning Arrestors, Earth wire. Introduction of Disaster Management Systems.		
UNIT II:	**General principles of electric safety**	**(02 hrs.)**
Electricity & Human body, Introduction to different electrical faults/hazards, AC and DC shock, Shock due to induction, Safety Requirements as per Electricity Act 2003, minimum horizontal, vertical, and sectional clearances, Design of safety oriented Electrical installations, General principles of electrical safety, Safety against over voltage, extra-low and residual voltages.		

CHAIRMAN
BOS-ELECTRICAL ENGINEERING
AISSMS ICIT (AUTONOMOUS),
PUNE-1.

UNIT III:	Earthing / Grounding	(02 hrs.)
Importance of earthing from safety point of view, earthing layout, touch potential and step potential, types of earthing, earthing of equipment, structure, foundation, and cable. Earth mesh, measurement of earthing values, construction of earth pits.		

UNIT IV:	Electrical Inspection	(02 hrs.)
Inspection procedures for statutory measures, inspection by Electrical inspectors, Check Point of Electrical inspection, Accident Statistics, Risk assessment & management, Central Electricity Authority (Measures relating to Safety and Electric Supply) (Amendment) Regulations, 2019		

UNIT V:	Safety and Fire Fighting equipment	(02 hrs.)
Safety equipment's- discharge rods, isolator earth blades, safety belts, shoes, helmets, hand gloves, rubber mat etc. Fire Fighting equipment's- Sand buckets, CO_2 gas cylinder, Soda-Acid type and foam type fire extinguishers, Nitrogen injection system, High Velocity water mist trolley.		

UNIT VI:	Miscellaneous topics	(02 hrs.)
Hazardous areas, Electrical insulation Electrical fires, Arc flash Safety issues with emerging energy sources First aid and Fire Fighting Practices in Industrial Installations/Substations, Fire alarm system		

Textbooks:

1. Massimo A.G. Mitolo, "Electrical Safety of Low-Voltage Systems", Mc Graw Hill, 2009.
2. John Cadick, Mary Capelli-Schellpfeffer, Dennis Neitzel, "Electrical Safety Handbook", 3rd edition, McGraw-Hill, 2006.
3. J. Maxwell Adams, "ELECTRICAL SAFETY - a guide to the causes and prevention of electrical hazards", The Institution of Electrical Engineers, 1994.

Reference Books:

1. W. Fordham Cooper, "Electrical Safety Engineering", second edition, Butterworth & Co., 1986.
2. D.C. Winburn, "Practical Electrical Safety", Marcel Dekker Inc., 1988.
3. Handbook of International Electrical Safety Practices, Princeton energy Resources International, 2010, Scrivener Publishing, USA.

List of Practical's: It is expected to take minimum 16 experiments from the following list:
(Maintain Record in file or separate notebook)
1. Study NEC 2023 and prepare a report on its main features.
2. Report on the working of Fire Alarm systems at Substations.
3. Report on the working of Nitrogen Injection Systems for Power Transformers at EHV substations.
4. Report on the working of smoke detectors installed at substations.
5. Study of provisions made on Electrical and fire safety in Disaster Management Systems.
6. Measurement of Earth Resistance at Electrical Installations/substations.
7. Measurement of touch potential & step potential.
8. Use of discharge rods, safety belts, safety shoes, chain pulley blocks, rubber matting etc.
9. Measurement of internal resistance of equipment by using Megger.
10. Measurement of surge counter of Lightning Arrester.
11. Report on action to be taken to reduce accidents.

CHAIRMAN
BOS-ELECTRICAL ENGINEERING
AISSMS IOIT (AUTONOMOUS),
PUNE-1.

12. Report on Electrical safety audit of industrial premise / commercial building / Residential building as per NEC 2023.
13. Study of ELCB / RCD and its testing to safeguard against electrical shock.
14. Thermography of industrial panel and report based on it to prevent electrical fire.
15. Case Study: This is a team activity in a batch. Each team will present a video of a case study on one of the topics related to Electrical safety. The presentation should have the following 5 components with a maximum of 5 min video:
    1) Explanation of the incident and identify issue
    2) Related law/standards
    3) Relate to learning outcomes achieved from this case study.
    4) State the Program Outcomes (PO's) satisfied.
    The video will be assessed by industry experts.

16. Demo/Substation Visit
    The demo on the following topics should be arranged at college. Alternatively, the visit at EHV substation should be organized covering these topics-
    a) Demo on safety equipment's –
        i. Discharge rods.
        ii. Hand Gloves
        iii. Helmets
        iv. Chain pulley blocks.
        v. Safety belts
        vi. Safety shoes
        vii. Rubber matting
    b) Presentation/ video on operation of firefighting equipment's such as Sand buckets, CO_2 gas
    c) cylinder, Soda-Acid type and foam type fire extinguishers.
    d) Measurement of earthing values at electrical installations.
    e) Demo on use of First Aid kits.
    f) Presentation/ video on the working of Nitrogen Injection Systems for transformers.
17. Demonstration of GFCI (Ground Fault Circuit Interrupter)
18. Demonstration of precautions or steps to be taken after someone gets electric shock.

Second Year B.TECH			
Computational Techniques Lab (ELPCC407)			
Course Code:	ELPCC407	**Credit**	**1**
Contact Hours:	2 Hrs./week (Pr.)	**Type of Course:**	Practical
Examination Scheme	Practical. Examination 25 Marks		

Prerequisite: -
1. Differentiation and integration of a single real variable, ordinary differential equations.
2. Programming and Problem solving.
3. Linear Algebra.
4. Programming language basics

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Practical Examination	External	25

Course Objectives:	
1	To explain how to draw flowchart
2	To explain how to write algorithm
3	To explain the fundamentals of programming and fundamentals of python

Course Outcomes: Students will be able to:	
407.1	Draw flowchart and write algorithm
407.2	Write programs for numerical methods using the concepts of python

List of Experiments:
Experiments are to be performed (Use Python Programming)

1. Programs for intermediate value theorem and Descartes Rule of Sign .

2. Solution of a transcendental equation using Bisection or Regula-Falsi method.

3. Program for interpolation using Newton's forward or backward interpolation.

4. Program for interpolation using Lagrange's or Newton's Divided difference Interpolation.

5. Solution of simultaneous equation using Gauss Seidel or Jacobi method.

6. Solution of a transcendental equation using Newton Rapson 1or 2 variables.

7. Solution of Numerical Integration using Simpson's (1/3) rd. or (3/8) th rule.

8. Solution of first order ODE using 4th order RK method or Modified Euler method.

Second Year B.TECH			
DC and Induction Machines Lab (ELPCC408)			
Course Code:	ELPCC408	Credit	1
Contact Hours:	2 Hrs./week (Pr.)	**Type of Course:**	Practical
Examination Scheme	Term Work 25 Marks	Practical Examination 25 Marks	

Prerequisite: -
Standard symbols and notations in circuit diagram, Theory related to transformer, DC machines,3 Phase Induction motor

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term Work Evaluation	Internal	25
2.	Practical Examination	External	25

Course Objectives:	
1	To impart knowledge about DC machine, power flow in DC machine and to introduce the concept of armature reaction.
2	To introduce fundamental concepts related to Electrical Machines and impart knowledge related to Transformer types, equivalent circuit formation and analysis, testing of transformer for determining performance parameters.
3	To impart knowledge about various characteristics, starting methods, testing of three phase induction motor, computation of various parameters from circle diagram.
4	To explain fundamental concepts related to BLDC Motor.

Course Outcomes: Students will be able to:	
408.1	Illustrate characteristics of DC motors and evaluate the performance parameters of DC motor.
408.2	Develop equivalent circuit and evaluate parameters of equivalent circuit, performance parameters of single-phase transformer using experimentation data and sketch configurations of three phase transformers.
408.3	Construct circle diagram and evaluate performance parameters of three phase Induction Motor
408.4	Explain fundamental concept of BLDC Motor.

List of Experiments: Perform any 8 Experiments given below
1. Speed control of D.C. Shunt Motor.
2. Brake test on D.C. Shunt Motor.
3. Hopkinson's test on D.C. Shunts Machines.
4. Polarity test on Single Phase Transformer.
5. O.C. and S.C. test on Single Phase Transformer.
6. Parallel operation of two Single Phase Transformers and study of their load sharing under various conditions of voltage ratios and leakage impedances.
7. To Perform Sumpner's test on Single Phase Transformers.
8. Study of Vector Groups of Three Phase Transformer.
9. Study of relevant standards for Transformer.
10. Load test on 3-phase Induction Motor.

11. No load & blocked-rotor test on 3-phase induction motor:
    a) Determination of parameters of equivalent circuit.
    b) Plotting of circle diagram
12. Study of constructional details and materials used for –Transformer,3 phase induction motor, DC machine.
13. Comparative study of BLDC Motor, Brushed DC Motor and Induction Motor.

Microcontroller & Integrated Circuit based Application Lab (ELPCC409)

Course Code:	ELPCC409	Credit		1
Contact Hours:	2 Hrs./week (Pr.)	Type of Course:		Practical
Examination Scheme	Term Work 25 Marks			

Prerequisite: -
Fundamental concept of Digital Electronics
Basic Knowledge of combinational and sequential logic circuits.

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term Work Evaluation	Internal	25

Course Objectives:	
1	To demonstrate IDE to program 8051.
2	To explain the programming of Serial port and configure interrupts.
3	To demonstrate the interlacing and programming of simple I/O devices to Arduino.
4	To demonstrate the interlacing and programming of I/O devices to 8051.

Course Outcomes: Students will be able to:	
409.1	Write simple programs in assembly and C language for 8051.
409.2	Program the serial port and use the interrupts of the 8051 microcontroller.
409.3	Program Arduino and interface simple I/O Devices
409.4	Interface various I/O devices with 8051/Arduino

List of Experiments: Perform any 8 Experiments given below

1. 8051 programming using IDE.
2. Interfacing of LED and programming blinking LED with 8051/Arduino
3. Interfacing of Relay and programming with 8051/Arduino.
4. Interfacing and programming of LCD with 8051/Arduino.
5. Interfacing and programming matrix keyboard with 8051/Arduino.
6. Temperature measurement and display using 8051/Arduino.
7. Interfacing of 8-bit ADC 0809 with 8051/Arduino.
8. Interfacing and programming GSM module with 8051/Arduino.
9. Develop a program to turn on and turn off the induction motor using GSM Module
10. Control of DC motor using PWM technique
11. Interfacing of SPI-enabled device with Arduino
12. Interfacing of Inter-integrated circuit(I2C) enabled device with Arduino

Second Year B. TECH			
Power Electronics Lab (ELPCC410)			
Course Code:	ELPCC410	Credit	1
Contact Hours:	2 Hrs./week (Pr.)	**Type of Course:**	Practical
Examination Scheme	Term Work 25 Marks	Practical Examination 25 Marks	

Prerequisite: -
1. Basic electronics engineering.
2. Basic electrical engineering.

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term Work Evaluation	Internal	25
2.	Practical Examination	External	25

Course Objectives:	
1	To introduce power electronics components and static V-I characteristics of SCR, TRIAC, IGBT and MOSFET.
2	To apply the concepts of power electronic converters for efficient conversion/control of power.
3	To demonstrate the working principle of various power electronic converters using simulation.
4	To develop the skills of analysis and simulation of power electronics converters.

Course Outcomes: Students will be able to:	
410.1	Describe the operation and characteristics of SCR, TRIAC, MOSFET and IGBT
410.2	Describe the operation of Single phase-controlled rectifiers
410.3	Describe the operation of Three phase-controlled rectifiers
410.4	Discuss the operation of different types of Choppers.
410.5	Discuss the operation of different types of Inverters.
410.6	Design the different power electronic circuits using MATLAB/Simulation.

List of Experiments:

Compulsory experiments:
1. Static VI characteristic of SCR and TRIAC
2. Output and transfer characteristic of IGBT and MOSFET
3. Analysis of Single phase fully controlled converter with R & RL load.
4. Study of Single phase A.C. voltage regulator.
5. Study of Three phase voltage source PWM inverter using 120^0 and 180^0 mode with R load.

Any three experiments are to be performed out of following (either hardware or simulation)
1. Three phase AC-DC fully controlled bridge converter R and RL load
2. Study of DC step down chopper.
3. Performance of Single phase A.C. voltage regulator with R and RL load in simulation.
4. Simulation of three phase AC-DC fully controlled bridge converter for R and RL load.
5. Simulations of three phase PWM Bridge Inverter for R Load for 120^0 and 180^0 conduction mode.
6. Performance analysis of three phase cascaded H-Bridge Multilevel inverter in simulation.

Second Year B.TECH			
Audit Course - 4 Sustainable Development Goals (IOHSM4AC)			
Course Code:	IOHSM4AC	**Credit**	1
Contact Hours:	1 Hrs./week (L)	**Type of Course:**	Lecture
Examination Scheme	Term Work 25 Marks		

Prerequisite: -
1. Basic Concepts of Environmental Studies

Sr. No.	Course assessment methods/tools	External/ Internal	Marks
1.	Term Work	Internal	25

Course Objectives:	
1	To discuss the sustainable development goals.
2	To explain framework of Seventeen Sustainable Development Goals.
3	To discuss structure and order of Sustainable Development Goals.
4	To introduce Sustainable Development Goals.

Course Outcomes: Students will be able to:	
410.1	Explain sustainable development goals.
410.2	Describe framework of Seventeen Sustainable Development Goals.
410.3	Discuss structure and order of Sustainable Development Goals.
410.4	Report case studies of Sustainable Development Goals.

Topics covered:		
UNIT I:	**Introduction to SDGs**	**(3 hrs.)**
Sustainability, Sustainable development, Role of UN and the Need for SDGs, Scope and Inclusion and Agenda 2030, Our Common Future and Philosophy behind SDGs, Distinction between Development and Sustainable Development.		

CHAIRMAN
BOS-ELECTRICAL ENGINEERING
AISSMS IOIT (AUTONOMOUS),
PUNE-1.

UNIT II:	Sustainable Development Goals	(5 hrs.)

Framework and Structuring of Seventeen SDGs
SDG 1: No Poverty
SDG 2: Zero Hunger
SDG 3: Good Health and Well-being
SDG 4: Quality Education
SDG 5: Gender Equality
SDG 6: Clean Water and Sanitation
SDG 7: Affordable and Clean Energy
SDG 8: Decent Work and Economic Growth
SDG 9: Industry, Innovation and Infrastructure
SDG 10: Reduced Inequality
SDG 11: Sustainable Cities and Communities
SDG 12: Responsible Consumption and Production
SDG 13: Climate Action
SDG 14: Life Below Water
SDG 15: Life on Land
SDG 16: Peace and Justice Strong Institutions
SDG 17: Partnerships to achieve the Goal.

UNIT III:	SDG Structure and Order	(3 hrs.)

Interrelationships and Connections between Seventeen SDGs, SDG Structure and Order at Levels of People, Ecological and Spiritual, SDGs and Socio Ecological Systems: Economy; Society; Biosphere

UNIT IV:	Sustainable Development Goals- Case Studies	(2 hrs.)

Case Studies from around the World, Case studies from India

Books:

1. Hazra, Somnath., Bhukta, Anindya (2020) Sustainable Development Goals An Indian Perspective, Springer International Publishing, Switzerland
