DEPARTMENT OF ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

Vision

To be amongst the top 5% of Artificial Intelligence & Data Science programs for catering to the changing needs of the industry and society.

Mission

1. To impart AI&DS skills emphasizing interdisciplinary design, development and analysis.
2. To foster employability, entrepreneurial and research opportunities in providing intelligent solutions for the needs of industry and society.
3. To promote career development with ethical responsibility.

Program Education Objectives (PEOs)

PEO1: Graduates will be able to analyze, formulate and function efficiently in a multi-disciplinary context to address industrial problems.
PEO2: Graduates will be able to work collaboratively with professionalism and ethical responsibilities to provide innovative solutions to society.
PEO3: Graduates will excel in their careers by adapting to new technologies.

Program Specific Outcomes (PSOs)

PSO1 Problem Solving and Programming Skills: Graduates will be able to apply programming skill to identify, modify and test algorithms that apply intelligence to make realistic decisions in problem solving.

PSO2 Professional Skills: Graduates will be able to collect, analyze, interpret and visualize data to solve problems in agriculture, automation, finance and medical domains.

Program Outcomes (PO's)

Graduates will be able to

1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. **[Engineering knowledge]**

2. Identify, formulate, research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. **[Problem analysis]**

3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. **[Design/development of solutions]**

4. Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. **[Conduct investigations of complex problems]**

5. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations. **[Modern tool usage]**

6. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. **[The engineer and society]**

7. Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. **[Environment and sustainability]**

8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. **[Ethics]**

9. Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. **[Individual and team work]**
